Discover new prospects for indoor applications

GATORFOAM® is an extremely rigid lightweight foamboard with resin-impregnated paper liners on both sides and an extruded polystyrene foam core. Its high rigidity and flatness as well as thicknesses up to 25 mm (available on request up to 50 mm) make GATORFOAM® the optimum choice for all kinds of display and 3D applications and ideal for all top-level imaging, lamination, decorative applications and interior design. The unique bright white surfaces of GATORFOAM® ensure high quality direct-to-substrate digital printing results.

Foamboard structure

Processing options

- Digital printing
- Screen printing
- Lacquering
- Painting / spray painting
- Mounting / laminating
- Gluing
- Simple mechanical processing with standard tools for processing wood and plastic - saws, die cutting and water-jet cutting equipment

(Avoid contact between the polystyrene core and inks and glues containing solvents)

GATORFOAM® offers

- a bright white surface
- excellent image quality with direct-to-substrate digital printing
- high rigidity and dimensional stability
- optimal flatness even with thin sheets
- quick processing options with standard tools e.g. saws and die cutting equipment

Product range
